

Lab 03

Goal

Write a complete README.md for the TaskTracker project — not just a name and photo.

Requirements

- Your README.md must include ALL of the following:
- An H1 title and a short H2 “About” section describing what TaskTracker does
- A bulleted “Features” list with at least 3 items (this list will keep growing as the semester goes on, so leave room to add to it later)
- A table with at least 3 rows listing methods in Main.java and what each one does
- A fenced code block showing how to compile and run the project
- A linked badge image (for example, a Java badge from <https://shields.io>) using Markdown image syntax
- At least one link to an outside resource (for example, the official Java documentation)

Syntax reminders

- Headings: ## Heading
- Bold: **bold text**
- Table row: | Column 1 | Column 2 |
- Code block: three backticks, your code, three backticks
- Link: [link text](#)
- Image:

Build it

- Create or edit README.md in your tasktracker folder with all the required sections above
- Add and commit your README

```
git add .
git commit -m "Add project README"
```

Submitting your solution

- Upload a PDF with screenshots showing your rendered README.md (view it on GitHub or in a Markdown previewer) and confirm each requirement above is visible
- Use the following Naming convention: Lab03_[Last Name].pdf

Example: Lab03_Maxwell.pdf

Task Tracker/Git Class

About

The Task Tracker tracks the tasks that you have to do. Everything is done through code and there is no UI, because UI is for losers.

Features

- Stores the list
- Prints the list
- Displays tasks neatly

Methods

Method	Args	Output
PrintList	String[] list	void, prints list
AddToList	String[] list, String itemToAppend	String[], returns new array with item appended
main	String[] args	void, runs the main code block

How To Run

```
$ java Main.java
```
