# Lab 07

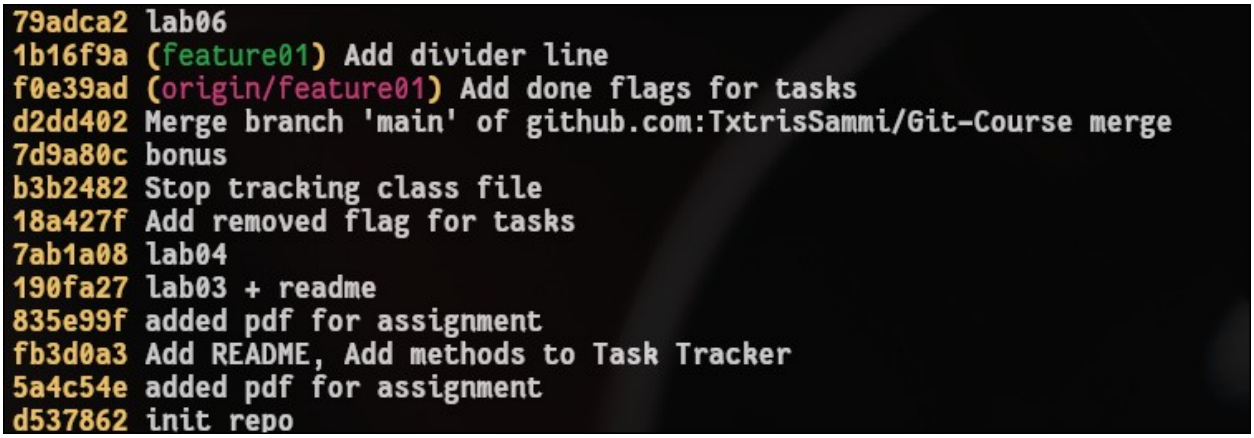

## Goal

Merge a branch back into main branch, and see the commit graph both from the command line and visually in GitKraken.

## Starting in your tasktracker repository using git bash

- Print out the current git history and list the current branches

```
git log --oneline
git branch
```

- Make sure you are in the “main” branch

```
git switch main
```

- **Predict first:** will merging feature01 create a brand new merge commit, or just move the main pointer forward? (Hint: think about whether main has any commits feature01 doesn't already have.)
- Merge in the changes from feature01

new merge commit

```
9e7bf12 (HEAD -> main, origin/main, origin/HEAD)        modified:   README.md
0125560 Merge branch 'feature01' merge
79adca2 lab06
1b16f9a (feature01) Add divider line
f0e39ad (origin/feature01) Add done flags for tasks
d2dd402 Merge branch 'main' of github.com:TxtrisSammi/Git-Course merge
7d9a80c bonus
b3b2482 Stop tracking class file
18a427f Add removed flag for tasks
7ab1a08 lab04
190fa27 lab03 + readme
835e99f added pdf for assignment
fb3d0a3 Add README, Add methods to Task Tracker
5a4c54e added pdf for assignment
d537862 init repo
```

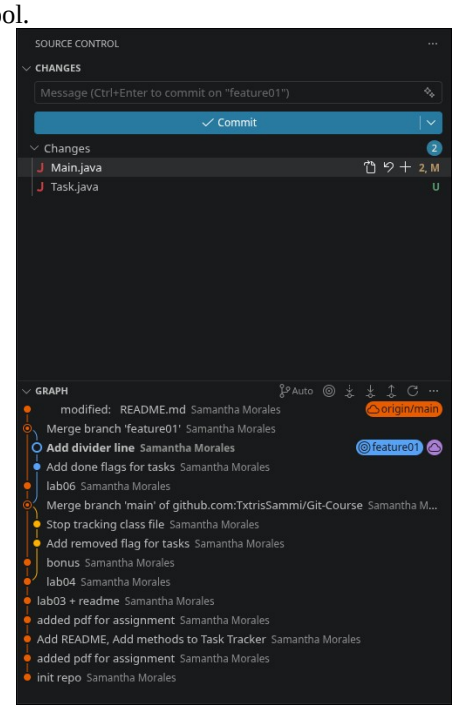

```
git merge feature01
git log --oneline
```

- View the full graph of both branches at once — this is a good habit to build for the rest of the semester

```
git log --graph --oneline --all
```

- Download GitKraken (https://www.gitkraken.com)

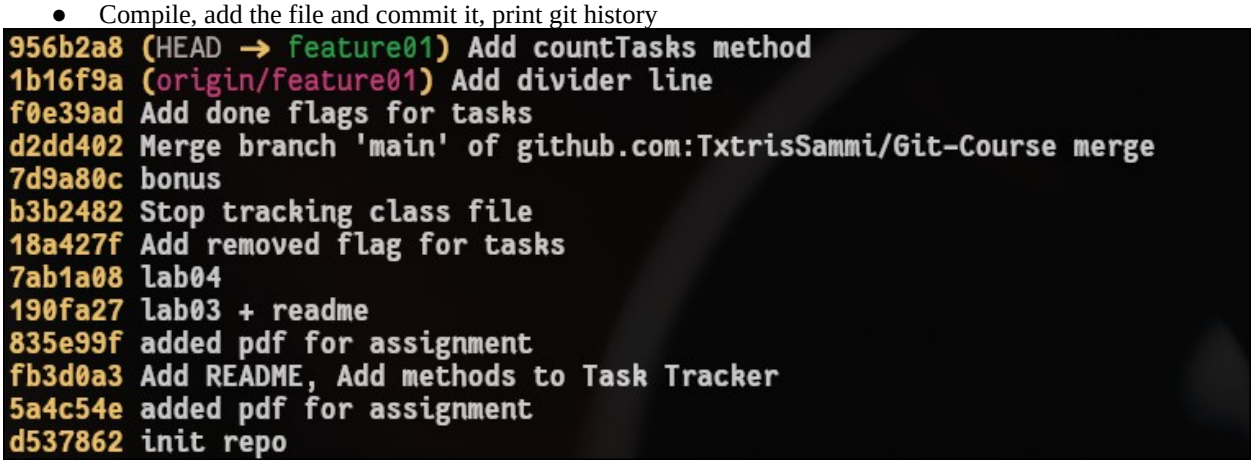

Open the “tasktracker” repo in the tool.

- 
- Switch back into “feature01” branch and add one more method to Main.java

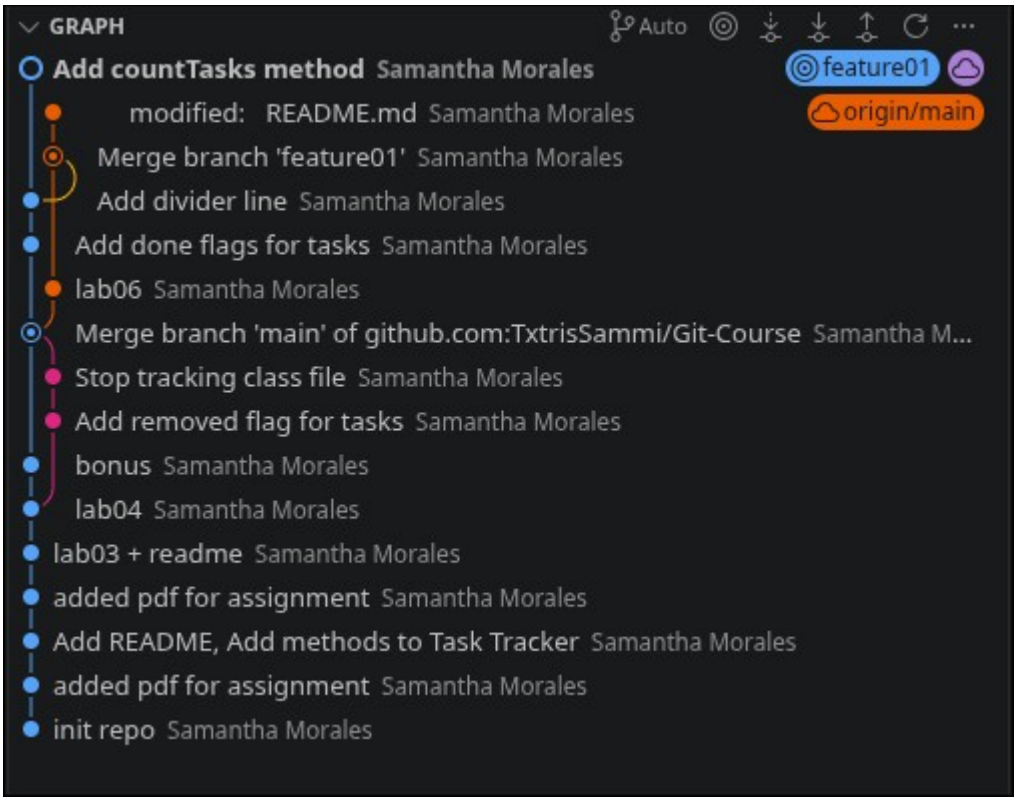

```
git switch feature01
public static void countTasks() {
    int total = tasks.size();
    int done = 0;
    for (Task t : tasks) {
        if (t.done) {
            done++;
        }
    }
    System.out.println(done + "/" + total + " tasks complete");
}
```

- Compile, add the file and commit it, print git history

```
javac Main.java Task.java
git add .
git commit -m "Add countTasks method"
git log --oneline
```

- Using Git Kraken merge the “feature01” branch back into main.
- Take a screenshot of the resulting graph in GitKraken, and compare it visually to the git log --graph output from earlier in this lab

## Submitting your solution

- Upload a PDF with screenshots of each step above
- Use the following Naming convention: Lab07_[Last Name].pdf

**Example**: Lab07_Maxwell.pdf
