

Lab 04

Goal

Connect your TaskTracker project to a remote repository on GitHub.

Setup GitHub Authentication (one-time setup)

- GitHub no longer accepts your account password when pushing from the command line. Before you can push, create a Personal Access Token (PAT) to use in its place.
- Go to GitHub and click your profile photo, then Settings
- Scroll down and click “Developer settings”
- Click “Personal access tokens”, then “Tokens (classic)”
- Click “Generate new token (classic)”
- Give it a name, an expiration, and check the “repo” scope
- Click “Generate token” and copy the token somewhere safe — GitHub will not show it to you again
- The first time Git asks for a password (for example, during the push below), paste this token in instead of your GitHub password

Connect tasktracker to a new remote repo on GitHub

- Goto to your GitHub account <https://github.com/USERNAME> (replace with your USERNAME in the URL bar once logged in)
- Add a new Repository named “tasktracker”
- It can be Public or Private
- Leave all the other settings as default
- Goto Git Bash and back into your “tasktracker” folder and execute the following commands

```
git remote add origin https://github.com/[your_username]/tasktracker.git
git branch -M main
git push -u origin main
```

- Refresh the browser of the GitHub “tasktracker” repository and you should now see the published files from your local repository.

README

Task Tracker/Git Class

About

The Task Tracker tracks the tasks that you have to do. Everything is done through code and there is no UI, because UI is for losers.

Clone the repository to a second folder

- Now practice the other direction: getting an existing remote repository onto your computer. In a different folder (not inside tasktracker), run:

```
git clone https://github.com/[your_username]/tasktracker.git tasktracker-clone
```

- This downloads a full copy of the repository — including its entire history — into a new “tasktracker-clone” folder.
- List the contents of tasktracker-clone and confirm the files from your original repository are there.

```
Sat 19 Sep - 19:24 ~/Documents/GitHub/tasktracker-clone origin main ✓
@txtrissammi git status
On branch main
Your branch is up to date with 'origin/main'.

nothing to commit, working tree clean

Sat 19 Sep - 19:24 ~/Documents/GitHub/tasktracker-clone origin main ✓
@txtrissammi ls
. . . .git Lab01_Morales.pdf Lab02_Morales.pdf Lab03_Morales.pdf Main.class Main.java README.md

Sat 19 Sep - 19:24 ~/Documents/GitHub/tasktracker-clone origin main ✓
@txtrissammi
```

Submitting your solution

- Upload a PDF with screenshots of each step above
- Use the following Naming convention: Lab04_[Last Name].pdf

Example: Lab04_Maxwell.pdf
